REVISION
The report being provided is a revision of the original report sent on 10/29/2025. The report (revision 1) is being revised due to: Client requesting reanalysis data set to Primary and initial analysis set to Secondary.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt
The samples were received on 10/14/2025 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 2.1°C, 2.7°C, 2.7°C, 2.9°C and 3.4°C.

Receipt Exceptions
The client direct shipped the 8015D DRO analyses to Eurofins Lancaster. Samples were received on10/142025 at 10:00 AM in temperature.

Job Narrative
280-214940-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt
The samples were received on 10/14/2025 9:10 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.5°C and 2.6°C.

The samples were analyzed on 10/14/2025.

The matrix spike and matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 280-717704 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

(280-214940-15), TMW64102025 (280-214940-16), FW31102025 (280-214940-17), MW33102025 (280-214940-18) and FDUP08-102025 (280-214940-19) were analyzed for Anions, Ion Chromatography. The samples were analyzed on 10/14/2025 and 10/15/2025.

Samples MW31102025 (280-214940-4)[5x], TMW61102025 (280-214940-5)[5x], TMW02102025 (280-214940-6)[10x], TMW04102025 (280-214940-9)[5x], TMW39S102025 (280-214940-11)[2x], MW27102025 (280-214940-12)[5x] and TMW59102025 (280-214940-14)[10x] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following samples have chromatographic interferences that could adversely impact the identification and quantitation of target analytes: MW26102025 (280-214940-1), TMW57102025 (280-214940-2) and MW34102025 (280-214940-8). These interferences impact Nitrate as N and may cause the values to have low bias.

The following samples have chromatographic interferences that could adversely impact the identification and quantitation of target analytes: TMW53102025 (280-214940-3), MW30102025 (280-214940-7), FDUP09-102025 (280-214940-13), FW31102025 (280-214940-17), MW33102025 (280-214940-18) and FDUP08-102025 (280-214940-19). These interferences cause Nitrate as N to be unidentifiable. The samples were reran at dilution. Once the interference was eliminated, Nitrate as N was not present. If nitrate as N is present in the sample it is consumed by the interference.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 280-717585 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

REVISION
The report being provided is a revision of the original report sent on 10/28/2025. The report (revision 1) is being revised due to: Client requesting reanalysis data set to Primary and initial analysis set to Secondary.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt
The sample was received on 10/15/2025 9:55 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.0°C.

Receipt Exceptions
The client direct shipped the 8015D DRO analyses to Eurofins Lancaster. Samples were received on 10/15/2025 at 09:55 AM in temperature.

Method 8015D DRO - Diesel Range Organics (DRO) (GC)
Sample QC14102025EB (280-214990-1) was analyzed for Diesel Range Organics (DRO) (GC). The sample was prepared on 10/19/2025 and 10/23/2025 and analyzed on 10/21/2025 and 10/25/2025.

Surrogate recovery for the following sample was outside control limits: QC14102025EB (280-214990-1). Re-extraction and/or re-analysis was performed past holding time and surrogate recovery was outside control limits. Multiple trials are reported.

The surrogate recovery for the blank associated with preparation batch 410-716373 and analytical batch 410-716843 was outside the control limits. Associated sample was re-extracted past holding time and reanalyzed in prep batch 410-718895. The surrogate recovery for the blank associated with preparation batch 410-718895 and analytical batch 410-719565 was outside the control limits. Multiple trials are reported.

The laboratory control sample (LCS) for preparation batch 410-716373 and analytical batch 410-716843 recovered outside control limits for the following analytes: DRO (C10-C28), o- terphenyl (Surr) and Oil Range Organics (C28-C40). The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Multiple trials are reported.

REVISION
The report being provided is a revision of the original report sent on 11/17/2025. The report (revision 1) is being revised due to:

- Include 8270E ICV summary form & ICV quant report for instrument SMS_3
- Include 9056A ICAL for instrument WC_IonChrom18

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt
The samples were received on 10/15/2025 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 20 coolers at receipt time were 0.1°C, 0.2°C, 0.6°C, 0.9°C, 0.9°C, 1.1°C, 1.5°C, 2.2°C, 2.4°C, 2.6°C, 2.6°C, 3.0°C, 3.7°C, 3.9°C, 3.9°C, 4.1°C, 4.2°C, 4.9°C, 5.1°C and 5.8°C.

Receipt Exceptions
One 250mL Nitric Acid preserved plastic container for sample MW27102025 (280-215015-3) and both 250mL Nitric Acid preserved plastic containers for samples MW30102025 (280-215015-2 and TMW45102025 (280-215015-33)
were received with insufficient preservation at a pH > 2. The laboratory will preserve the samples at the bench prior to analysis.

The samples were analyzed on 10/22/2025, 10/23/2025 and 10/24/2025.

The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 280-719112 recovered outside control limits for the following analytes: Trichloroethene (79%-123%) at 124%. This analyte was biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 280-719112. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 280-719297 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

The continuing calibration verification (CCV) associated with batch 280-719112 recovered above the upper control limit (20%) for Trichloroethene at 24%. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are: QC13102025TB (280-215015-1), MW30102025 (280-215015-2), MW27102025 (280-215015-3), TMW02102025 (280-215015-4), MW31102025 (280-215015-5), TMW61102025 (280-215015-6), MW34102025 (280-215015-7), TMW52102025 (280-215015-8), TMW04102025 (280-215015-9), TMW53102025 (280-215015-10), MW26102025 (280-215015-11), TMW57102025 (280-215015-12), TMW39S102025 (280-215015-13), TMW17102025 (280-215015-14),

Reanalysis of the following sample was performed outside of the analytical holding time due to the initial value being over the calibration range: TMW03102025 (280-215015-21). This out of hold, in the calibration range, value, confirms the in hold, over the calibration range, value. Re-analysis was performed within 2X holding time.

Reanalysis of the following sample was performed outside of the analytical holding time due to the interference present in the initial analysis: TMW45102025 (280-215015-28). Re-analysis was performed within 2X holding time.

The concentration of the matrix spike reagent caused the results for the matrix spike and matrix spike duplicate (MS/MSD) to be above the highest point of the calibration range for Nitrate as N: TMW01102025 (280-215015-29[MS]) and TMW01102025 (280-215015-29[MSD]).

The concentration of the matrix spike reagent caused the results for the matrix spike and matrix spike duplicate (MS/MSD) to be above the highest point of the calibration range for Nitrite as N. The results for the MS/MSD are still within the standard control limits of 80-120%: TMW01102025 (280-215015-29[MS]) and TMW01102025 (280-215015-29[MSD]).

The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for analytical batch 280-717818 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

The concentration of the matrix spike reagent caused the results for the matrix spike and matrix spike duplicate (MS/MSD) to be above the highest point of the calibration range for Nitrate as N. Job Narrative
280-215054-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt
The samples were received on 10/16/2025 9:45 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.4°C and 3.4°C.

Receipt Exceptions
The client direct shipped the 8015D DRO analyses to Eurofins Lancaster. Samples were received on 10/16/2025 at 09:45 AM in temperature.

Method 8015D DRO - Diesel Range Organics (DRO) (GC)
Samples TMW06102025 (280-215054-1), MW18D102025 (280-215054-2), TMW35102025 (280-215054-3), MW20102025 (280-215054-4) and QC15102025EB (280-215054-5) were analyzed for Diesel Range Organics (DRO) (GC). The samples were prepared and analyzed on 10/22/2025.

Job Narrative
280-215267-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt
The samples were received on 10/17/2025 9:10 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.3°C and 2.1°C.

Method 8260D - Volatile Organic Compounds (GC/MS)
Samples TMW38102025 (280-215267-1), TMW32102025 (280-215267-2) and QC16102025TB (280-215267-3) were analyzed for Volatile Organic Compounds (GC/MS). The samples were analyzed on 10/24/2025.

Surrogate recovery for the following sample was outside the upper control limit: TMW32102025 (280-215267-2). This sample did not contain any target analytes; therefore, re-analysis was not performed.

Method 8270E - Semivolatile Organic Compounds (GC/MS)
Sample TMW38102025 (280-215267-1) was analyzed for Semivolatile Organic Compounds (GC/MS). The sample was prepared on 10/23/2025 and analyzed on 10/24/2025.

Internal Standard (ISTD) retention times for the following sample was outside the acceptance criteria of +/-0.17 minutes from the mid-point of the initial calibration: (CCVIS 280-719309/3). The sample(s) were within +/-0.17 minutes from the daily calibration verification; therefore, no corrective action was required per the laboratory's SOP.

The continuing calibration verification (CCV) associated with batch 280-719309 recovered above the upper control limit for Butyl benzyl phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are: TMW38102025 (280-215267-1) and (CCVIS 280-719309/3).

The continuing calibration verification (CCV) associated with batch 280-719309 recovered outside acceptance criteria, low biased, for Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8015D GRO - Gasoline Range Organics (GRO)
Sample QC16102025TB (280-215267-3) was analyzed for Gasoline Range Organics (GRO). The sample was analyzed on 10/22/2025.

Method 8330B - Nitroaromatics and Nitramines (HPLC)
Samples TMW38102025 (280-215267-1) and TMW32102025 (280-215267-2) were analyzed for Nitroaromatics and Nitramines (HPLC). The samples were prepared on 10/20/2025 and analyzed on 10/21/2025 and 10/22/2025.

Method 6850 - Perchlorate by LC/MS or LC/MS/MS
Samples TMW38102025 (280-215267-1) and TMW32102025 (280-215267-2) were analyzed for Perchlorate by LC/MS or LC/MS/MS. The samples were analyzed on 10/28/2025 and 11/3/2025.

Sample TMW32102025 (280-215267-2)[50x] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following samples in analytical batch 280-720046 were received with less than 1/3 headspace: TMW38102025 (280-215267-1).

The following sample was diluted to bring the concentration of target analytes within the calibration range: TMW32102025

(280-215267-2). Elevated reporting limits (RLs) are provided.

Method 6020B - Metals (ICP/MS)
Samples TMW38102025 (280-215267-1) and TMW32102025 (280-215267-2) were analyzed for Metals (ICP/MS). The samples were prepared on 10/17/2025, 10/21/2025 and 11/13/2025 and analyzed on 10/22/2025, 10/26/2025, 10/28/2025, 11/14/2025 and 11/17/2025.

Samples TMW38102025 (280-215267-1)[50x] and TMW32102025 (280-215267-2)[25x] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The initial calibration verification (ICV) and CCV result for batch 280-719617 was above the upper control limit. The affected analytes are: Na. Sample results were QC, and were not reanalyzed as they are within acceptance limits, ND, or are otherwise cannot be evaluated even via rerun, and have been reported as qualified data.

The continuing calibration verification (CCV) associated with batch 280-719982 recovered above the upper control limit for Zn. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are: TMW32102025 (280-215267-2), (CCV 280-719982/165), (CCV 280-719982/173) and (CCV 280-719982/183).

The continuing calibration verification (CCV) associated with batch 280-719092 recovered above the upper control limit for Zn. The samples associated with this CCV were QC (LCS) and within acceptance limits for the affected analytes; therefore, the data have been reported. The associated samples are: (CCV 280-719092/29) and (LCS 280-718328/2-A).

The continuing calibration verification (CCV) associated with batch 280-718991 recovered above the upper control limit for Ca, Mg, K, Na. The samples associated with this CCV were used as QC for the affected analytes; therefore, the data have been reported. The associated sample is: (CCV 280-718991/44).

The Continuing Calibration Blank(CCB) for analytical batch 280-722916 contained Na greater than the reporting limit (RL), and were not reanalyzed because samples reported are <1/2 RL, >10x the value found in the CCB or QC that are within acceptable ranges. The data have been qualified and reported: TMW32102025 (280-215267-2), (CCB 280-722916/19), (LCS 280-722657/2-A), (LCSD 280-722657/3-A) and (MB 280-722657/1-A).

The low level check (CRI) associated with batch 280-722916 recovered above the upper control limit for Mn. The samples associated with this CRI were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are: (CRI 280-722916/9) and (MB 280-722657/1-A).

Method 6020B - Metals (ICP/MS) - Dissolved
